

Building the Logistical Highways of the Sky

Wingcopter: Delivering a New Era of Autonomous, On-Demand Logistics.

Traditional Logistics is Reaching Its Limits

Geographic Barriers

Insufficient infrastructure hinders reliable delivery to remote islands, mountainous areas, and offshore platforms.

Time-Critical Needs

Medical supply chains and emergency response demand a speed that conventional ground transport cannot guarantee.

Systemic Pressures

Labor shortages and the need for disaster preparedness strain existing delivery networks, particularly in regions like Japan.

Our Solution: The Wingcopter 198

An all-electric, vertical-take-off-and-landing (eVTOL), fixed-wing drone, designed from the ground up to meet aviation safety and reliability requirements.

VTOL Flexibility

Takes off and lands vertically anywhere without requiring additional infrastructure.

Fixed-Wing Efficiency

Transitions smoothly to fly long distances as efficiently and quickly as a fixed-wing aircraft.

All-Weather Operation

Engineered to perform reliably even in rain and strong winds.

Engineered for Unmatched Performance

150 km/h **110 km**

Top Speed

Max Range

6 kg

Max Payload

15 m/s

Wind Resistance (Average)

Operational Range vs. Payload

Designed for Maximum Operational Efficiency

The Triple-Drop Mechanism

Deliver up to three packages to multiple destinations in a single, fully automatic flight. The system offers maximum flexibility for one large, two medium, or three separate packages.

Scalable Fleet Operations

A single operator can control a fleet of up to 10 Wingcopter 198s simultaneously, anywhere in the world, via our advanced control station software.

Built to Aviation-Grade Safety Standards

Engineered to meet stringent safety standards, leveraging operational experience from over five years of missions in environments from the Arctics to the Middle Eastern desert.

Redundant Systems

Propulsion: 8 motors for complete redundancy.

Avionics: Dual flight controllers, IMUs, barometers, and batteries.

Connectivity: LTE/5G primary link, backed up by Iridium satellite.

Advanced Awareness

Our detect-and-avoid software combines ADS-B, Flarm, Remote ID, and visual AI to interpret the flight environment and automatically initiate evasive maneuvers.

Validated by the World's Leading Aviation Authorities

FAA (USA) Milestone

In May 2022, the FAA issued the Special Class Airworthiness Criteria for the Wingcopter 198, a critical milestone in the U.S. Type Certification process.

JCAB (Japan) Milestone

In April 2024, JCAB accepted the Wingcopter 198 into its type certification process—the first foreign company's drone and the first fixed-wing drone ever to be accepted.

The Commercial Impact

This level of certification is the key to unlocking commercial drone delivery at scale, enabling Beyond Visual Line of Sight (BVLOS) flights over populated areas.

Building Commercial Networks with Global Leaders

Africa - The World's Largest Deployment

A landmark partnership with Continental Drones to roll out

12,000

Wingcopter 198 drones across 49 sub-Saharan countries, creating based auturnatic drone-based delivery networks to fuel economic development.

Japan - Strategic Market Entry

A deep partnership with **ITOCHU Corporation**, a key investor, to establish drone delivery networks and pioneer commercial BVLOS operations in one of the world's largest potential markets.

Global Logistics - The Ecosystem

Strategic alliances with logistics giants including **DHL** and **UPS** are vital for global expansion and integration into existing supply chains.

When Minutes Matter: Revolutionizing Medical Delivery in Japan

Project Spotlight: Okinawa Blood Transport

Partners: ITOCHU, ANA Holdings, Japanese Red Cross

The Mission: To establish an air bridge for vital medical supplies across Okinawa's 48 inhabited islands, especially during emergencies.

The Result: A **53 km** test route was covered in as little as **32 minutes**, successfully transporting research blood while maintaining a strict temperature of **2-6°C**.

The results of this verification...show that drones may be useful as a means of transporting blood appropriately to where it is needed.

– Hiroshi Fujita, MD, PhD.

Wingcopter 198: Technical Specifications

Hardware

Type:	electric tilt-rotor (eVTOL)
Dimensions:	65 x 198 x 152 cm [H x W x L]
Max Take-Off Weight:	25 kg
Max Payload:	5 kg
Propulsion:	8x rotors (4x tiltable)

Avionics & Awareness

Avionics:	2x flight controllers, 6x IMUs, 2x barometers
Connectivity:	Cellular (3G, 4G, 5G) + Satellite (Iridium)
Awareness Radios:	ADS-B In, FLARM In/Out, Remote ID

Performance

Max Cruise Speed:	40 m/s (144 km/h)
Max Altitude (Fixed-wing):	5000 m AMSL
Operating Temperature:	0 - 45° Celsius

A Multi-Channel Strategy for Global Growth

Direct Sales

Our online platform provides direct access to product details and purchasing, accounting for approximately 35% of total revenue in 2024.

Strategic Alliances

Partnerships with logistics leaders like DHL, UPS, and ANA Holdings are vital for global expansion and navigating local market dynamics.

Authorized Partner Program

We qualify, certify, and enable a global network of drone-as-a-service providers and distributors to operate and promote Wingcopter technology.

Global Market Penetration

The Future is a Network of Logistical Highways

The Vision Realized

The deployment of 12,000 drones across Africa is the blueprint for our vision: creating continent-wide, zero-emission delivery networks that fuel economic development and help improve the livelihood of millions.

The Strategy

We will integrate drone fleets into conventional supply networks, creating a more sustainable and resilient medical and logistics system for the future.

Innovating Beyond Electric: The Hydrogen Frontier

The Partnership

A development partnership with ZAL Center of Applied Aeronautical Research to develop a sustainable, hydrogen-based propulsion system.

The Goal

To refit the Wingcopter 198 to run on green hydrogen, significantly extending flight times and enabling even greater delivery distances.

A Commitment to Sustainability

"We categorically ruled out the installation of a conventional combustion engine right from the start with a view to the environment and climate change."

– Tom Plümmer, CEO, Wingcopter

Why Wingcopter Leads the Future of Drone Logistics

1. Superior Technology

A patented eVTOL design delivering unmatched performance, game-changing efficiency with its Triple-Drop system, and aviation-grade safety.

2. Unrivalled Regulatory Validation

The first fixed-wing drone in type certification with both the **FAA (USA)** and **JCAB (Japan)**, unlocking the world's key commercial markets.

3. Proven Market Traction

Validated by global leaders like ITOCHU, DHL, and UPS, and executing the world's largest commercial drone deployment of 12,000 units in Africa.

4. A Bold, Sustainable Vision

Building the logistical highways of the sky today while pioneering the next generation of sustainable aviation with hydrogen power.
